

RESOURCE MANAGEMENT SYSTEM

09/723319

Abstract of the Disclosure

A resource management system includes a work plan builder module configured to build work plans for workers. The work plan builder module is configured to allow each worker to specify, for each of a plurality of different time periods, one of a plurality of different activities that the worker plans to perform during that time period. The work plans built by the work plan builder module are stored in a computer-accessible memory.
